

## Fact Sheet

- The Company:**
- Methodics LLC is a leading developer of design data management (DM) tools for ICs, and is the first company to offer a tool suite for global IC design collaboration.
  - Providing standard software configuration management (SCM) functionality on an advanced modular platform that enables hardware design methodologies in a version-controlled context, the new Methodics solution represents a revolutionary approach to global design collaboration.
- Technology:**
- Methodics LLC has developed the VersIC 2.0 platform, a DM tool that abstracts the backend database, allowing easy integration of industry-standard SCM tools and facilitating software-style methodologies in the custom IC design environment.
  - The VersIC 2.0 platform allows plug-in modules that extend the data-management functionality to design reviews, diff/merge of cell views, continuous integration methodologies and others, enhancing the global design collaboration experience for its users.
- Executive & R&D Teams:**
- Simon Butler, Founder & CEO
  - Fergus Slorach, Founder & CTO
  - 12 employees
- History:**
- Incorporated June 2006
  - First beta customer installed, December 2006
  - Self-funded
- Location:** 330 Townsend St., #110  
San Francisco CA 94107
